Ember Glass Radiant Panel Heaters

Ember Glass radiant panels can be mounted horizontally or vertically to any wall in a home to provide energy efficient infrared radiant heat. Our Ember Glass panels are solidly constructed and feature an attractive white or black finish.

Unlike convection heating, this panel does not circulate dust or other allergens into the air. Plus, it can be multi-functional. Use the Ember radiant panel to heat up a room, or attach towel bars to a vertically mounted unit to create a unique, stylish towel warmer.

These panels are also dual connection, meaning they can be used "as is" to plug into a standard 120 VAC outlet or they can be modified by a licensed electrician to have a hardwired 120 VAC electrical connection.

- Comes with either a black or white finish and a 5-year warranty
- Can be mounted horizontally or vertically
- Add-on accessories include towel bars (vertical installation only)
